

## Sheet-2 Neural Networks

1- A two-layer neural network is to have four inputs and six outputs. The range of the outputs is to be continuous between 0 and 1. What can you tell about the network architecture? Specifically:

- How many neurons are required in each layer?
- What are the dimensions of the first-layer and second-layer weight matrices?
- What kinds of transfer functions can be used in each layer?
- Are biases required in either layer?

2- We have a classification problem with four classes of input vector. The four classes are

$$\text{class 1: } \left\{ \mathbf{p}_1 = \begin{bmatrix} 1 \\ 1 \end{bmatrix}, \mathbf{p}_2 = \begin{bmatrix} 1 \\ 2 \end{bmatrix} \right\}, \text{ class 2: } \left\{ \mathbf{p}_3 = \begin{bmatrix} 2 \\ -1 \end{bmatrix}, \mathbf{p}_4 = \begin{bmatrix} 2 \\ 0 \end{bmatrix} \right\},$$
$$\text{class 3: } \left\{ \mathbf{p}_5 = \begin{bmatrix} -1 \\ 2 \end{bmatrix}, \mathbf{p}_6 = \begin{bmatrix} -2 \\ 1 \end{bmatrix} \right\}, \text{ class 4: } \left\{ \mathbf{p}_7 = \begin{bmatrix} -1 \\ -1 \end{bmatrix}, \mathbf{p}_8 = \begin{bmatrix} -2 \\ -2 \end{bmatrix} \right\}.$$

**Design a perceptron network to solve this problem.**

3- Solve the following classification problem with the perceptron rule. Apply each input vector in order, for as many repetitions as it takes to ensure that the problem is solved. Draw a graph of the problem only after you have found a solution.

$$\left\{ \mathbf{p}_1 = \begin{bmatrix} 2 \\ 2 \end{bmatrix}, t_1 = 0 \right\} \left\{ \mathbf{p}_2 = \begin{bmatrix} 1 \\ -2 \end{bmatrix}, t_2 = 1 \right\} \left\{ \mathbf{p}_3 = \begin{bmatrix} -2 \\ 2 \end{bmatrix}, t_3 = 0 \right\} \left\{ \mathbf{p}_4 = \begin{bmatrix} -1 \\ 1 \end{bmatrix}, t_4 = 1 \right\}$$

**Use the initial weights and bias:**

$$\mathbf{W}(0) = \begin{bmatrix} 0 & 0 \end{bmatrix} \quad b(0) = 0.$$

4- We want to train a perceptron network with the following training set:

$$\left\{ \mathbf{p}_1 = \begin{bmatrix} -1 \\ -1 \end{bmatrix}, t_1 = 0 \right\} \left\{ \mathbf{p}_2 = \begin{bmatrix} 0 \\ 0 \end{bmatrix}, t_2 = 0 \right\} \left\{ \mathbf{p}_3 = \begin{bmatrix} -1 \\ 1 \end{bmatrix}, t_3 = 1 \right\}.$$

The initial weight matrix and bias are

$$\mathbf{W}(0) = \begin{bmatrix} 1 & 0 \end{bmatrix}, b(0) = 0.5.$$

- i. Plot the initial decision boundary, weight vector and input patterns. Which patterns are correctly classified using the initial weight and bias?
- ii. Train the network with the perceptron rule. Present each input vector once, in the order shown.
- iii. Plot the final decision boundary and demonstrate graphically which patterns are correctly classified.
- iv. Will the perceptron rule (given enough iterations) always learn to correctly classify the patterns in this training set, no matter what initial weights we use? Explain

**Answer the following MCQs questions**

**5-What is the main function of a neural network's output layer?**

- a. To perform feature extraction
- b. To make predictions or classifications
- c. To introduce non-linearity
- d. None of the above

**6-In a feedforward neural network, information flows \_\_\_\_\_.**

- a. Only in the forward direction
- b. Only in the backward direction
- c. In both forward and backward directions
- d. In random directions

**7- For what purpose, hamming network is suitable?**

- a) classification
- b) association
- c) pattern storage
- d) none of them

**8-A perceptron is a**

- a) Feed-forward neural network
- b) Back-propagation algorithm
- c) Back-tracking algorithm
- d) Feed Forward-backward algorithm

**9-The network that involves backward links from output to the input and hidden layers is called**

- a) Multi layered perceptron
- b) Perceptron
- c) Recurrent neural network

**10-Output of Recurrent Network layer is**

- a)  $a(t+1) = \text{Satlin}(W a(t) + b)$
- b)  $a(t) = \text{Satlin}(W a(t) + b)$
- c) None

**11-Given a two-input neuron with the following parameters:  $b=1.2$ ,  $w = [3 \ 2]$  and  $p = [-5 \ 6]^T$ , calculate the neuron output for the **Hard-limit** transfer function:**

- a) -1
- b) -2
- c) 1

The Answer Is Zero
